

From the CEO

In this edition of ***Sequent Talks***, let's explore AI Agents and yes, we've had them for centuries.

Think of farmers using oxen in ancient times or silk weavers operating Jacquard looms. These were early forms of automation, or what we now call "agents." Humans have always looked for ways to reduce effort, using tools and machines to make life easier. Today, that pursuit continues through AI.

Agentic AI refers to systems that function like intelligent personal assistants. They can operate independently, pursue specific goals, make data-driven decisions, and interact with other systems. From scheduling assistants and smart home devices to autonomous vehicles and trading bots, agentic AI is already streamlining many of the repetitive tasks in our lives.

Also in this edition, see how automation is transforming CLM and discover the powerful ways AI is helping doctors do more than ever before.
